

8/6/13 Draft RAVI SIP revision**8.2.1.5 Phase I Visibility Rules - Wyoming Reasonably Attributable Visibility Impairment (RAVI) Rules**

In response to EPA's Phase I visibility rules, Wyoming adopted the Wyoming State Implementation Plan for Class I Visibility Protection, effective May 10, 1988. It was approved by the U.S. EPA by notice in the Federal Register on February 15, 1989, under 40 CFR part 52, and became effective on April 17, 1989. This visibility rule contains short and long-term strategies (LTS) for making reasonable progress toward the national goal, related to addressing reasonably attributable impairment in the State's Class I areas through visibility monitoring and control strategies. This rule incorporates PSD requirements for visibility protection from new or modified major stationary sources, and if necessary applying BART to existing stationary sources if certified as causing reasonably attributable visibility impairment. The WDEQ-AQD will address the periodic review and revision requirements of the long-term RAVI strategy as required by 40 CFR 51.306(c) and coordinate them with the regional haze LTS periodic progress reports required by 40 CFR 51.308(g).
